EDUCATION

University of Houston

August 2024

Bachelor of Science in Computer Science (Honors: Dean's List)

Houston, TX

EXPERIENCE

Verizon

March 2025 – Current

Software Engineer Apprentice

Irving, TX

- Developed Agentic AI/API-based replacements for legacy RPA bots, enabling over \$1M+ in operational savings.
- Implemented ticket volume forecasting using GenAI APIs, enabling leadership to reduce incoming tickets by 20%.
- Built a web-based automation hub with FastAPI that consolidated 150+ long-standing automation workflows.
- Designed a Flask-based analytics dashboard that ingested 10,000+ tickets and surfaced 3+ KPIs using psycopg2.
- Extended internal tool with Robot framework automation logic, increasing throughput to 5+ bulk orders per run.
- Delivered an automation solution that executed 14 Remove-Location orders, reducing intervention to near-zero.

Sycamore Life Sciences

June 2021 – September 2021

Software Engineer Intern

Houston, TX

- Developed a website with RESTful API and MySQL-backed infrastructure for optimal user experience.
- Implemented client-side caching, improving page load times and reducing redundant API calls by 30%.
- Designed components using JavaScript and HTML with async data fetching, reducing page load times by 40%.
- Automated pricing analysis for 250+ products using Python and Selenium by aggregating/filtering data.

PROJECTS

Global Food Safety Website | *Java, Spring Boot, React, TypeScript, MySQL*

January 2025

- Developed a full-stack website with Java and Spring Boot to display global food statistics for 100+ countries.
- Built front-end using React, HTML, CSS, and TypeScript, providing responsive visuals and UI components.
- Established a RESTful API using MySQL and Hibernate, supplying CRUD endpoints for seamless data retrieval.
- Implemented front-end and back-end caching strategies, reducing server workload and website load times by 30%.

Chip-8 Interpreter | *Python, Pygame, Docker*

August 2024

- Built a Chip-8 virtual machine using Python, implementing 30+ functions to execute and run classic programs.
- Optimized CPU timing using multithreading, ensuring 700-1000 instructions/second with 60 Hz delay timers.
- Containerized program with Docker, enabling CI/CD by creating portable and reproducible environments.
- Employed a test suite to validate the accuracy of emulation, achieving 97% accuracy to ensure high performance.

TECHNICAL SKILLS

Languages: Java, Python, C#, JavaScript, TypeScript, SQL, HTML, CSS, R

Frameworks/Libraries: Node.js, Express.js, Hibernate, Tailwind CSS, React, NumPy, Selenium, BeautifulSoup

Developer Tools: Git, Linux, MongoDB, MySQL, Gradle, Magento, npm, Vite, Posit, Docker

Relevant Courses: Data Structures/Algorithms, Database Systems, Software Design, Computer Architecture
